

Inoving

## Vibration fork level switches type INOVING R-400 /

## General description

KFG Level has revamped the popular Inoving range of Vibrating Forks for an even higher performance and for a greater flexibility of use. The reengineered extreme short fork section enables applications in tight spaces and also on pipes. The 6 times increased excitation frequency will ensure interface-free operation if used on vibrating structures.
Media: The Inoving can be used in almost all media like explosive and non-explosive liquids, aggressive liquids (acids, solvents), high viscosity liquids; unaffected by foam, turbulence, gas content.
It can also be used on light and medium density free flowing granulates and powders.
Application: The Inoving covers a large variety of level detection applications and more... ; high / low fail safe limit switch, overfill or dry run protection, pump controls, dry / wet indication in pipes.

## Highlights of the Inoving:

- Fit and forget device; simple installation -no maintenance.
- Switching performance does not depend on the change of liquid conductivity, dielectric constant, viscosity, pressure and temperature.
- Probe extension up to 3 m length.
- Flange or slinding sleeve options.
- ECTFE (HALAR®) coated versions for aggressive or sticky media.
- Hygienic versions with varius process connections and 0,5 micron fine polishing.
- high or low fail-safe mode, as well as the medium density is field programmable on most models.
- opertion test of installed units can be performed with the help of a test magnet on some of the models.

## General

## NOVING RF-400 or RF-500

is the "Standard" version with paint coated, robust Aluminium or plastic housing; visible, large bicolour output state indication LED; 1 or 2 power relay output and universal AC/DC power supply.

INOVING RC-400 is the
"Mini" version incorporating a stainless steel tube housing, visible bicolour output state indication LED, and 2 -wire AC, 2 -wire DC or 3-wire PNP/NPN transistor output.

INOSWITCH JDT-131 Ex the CENELEC approved 2wire RC-400 Ex vibration forks requires an intrinsically safe remote switching unit containing the intrinsically safe barrier and a potential free output.

## APPLICATION AND INSTALLATION

## Application on liquids

In applications on liquids with

- low viscosity (without risk of remaining material on the fork-tines) any of the mounting shown beside is possible,
- high viscosity (due to risk of remaining material on the fork-tines) only vertical (top) mounting can be suggested. In applications with side mounting take care of the positioning mark.

## Vibration fork level switches type INOVING R-400 / R-500

## APPLICATION AND INSTALLATION

## Application on liquids

In applications on liquids with

- low viscosity (without risk of remaining material on the fork-tines) any of the mounting shown beside is possible,
- high viscosity (due to risk of remaining material on the fork-tines) only vertical (top) mounting can be suggested.

In applications with side mounting take care of the positioning mark.

Use always HIGH density setting ( $\rho \geq 0.7 \mathrm{~kg} / \mathrm{dm} 3$ ) for application on liquids!

Installation on liquids

$X>5 \mathbf{m m}$

For dry/w et detection, fork-tines must be parallel to the direction of flo

## Positioning and switching point

For positioning the fork-tines, use the marking on the hexagon neck.

Use a TEFLON (PTFE) tape to aid the positioning of the fork-tines. If the fork-tine position is irrelevant, use the sealing ring provided.

Values are for water at $25^{\circ} \mathrm{C}$
Liquids: switching point as well as the switch differential slightly depends on liquid density and mounting position.
Solids: switching point as well as the switch differential slightly depends on material quality and mounting position.

## Electrical connections

## «M IN।» models in stainless steel housing <br> $\Rightarrow$ 3-w ire DC versions with PNP/NPN transistor output, to drive relays, PLC-s

Connector output version $R \square$ $-4 \square$ - 3

Top view with removed connector:

«L» - Low - level limit switch
«D» - Density
«H»- High
«L» - Low

The «SHORTY» models for liquid only

«M»- Operation mode
«H» - High - level limit switch
«L» - Low - level limit switch

## Density setting

HIGH density Liquids: $\rho \geq 0,7 \mathrm{~kg} / \mathrm{dm}^{3}$
Solids: $\rho \geq 0,5 \mathrm{~kg} / \mathrm{dm}^{3}$
LOW density Solids. $\rho<0,5 \mathrm{~kg} / \mathrm{dm}^{3}$

Integral cable output version $\quad R \square \square-4 \square \square-4$
PNP mode
HIGH density
(liquids $\rho \geq 0,7 \mathrm{~kg} / \mathrm{dm}^{3}$, Solids $\rho \geq 0,5 \mathrm{~kg} / \mathrm{dm}^{3}$ )

## PNP mode

LOW density
(Solids $\rho<0,5 \mathrm{~kg} / \mathrm{dm}^{3}$ )

NPN mode
HIGH density
(liquids $\rho \geq 0,7 \mathrm{~kg} / \mathrm{dm}^{3}$, Solids $\rho \geq 0,5 \mathrm{~kg} / \mathrm{dm}^{3}$ )

NPN mode
LOW density
(Solids $\rho<0,5 \mathrm{~kg} / \mathrm{dm}^{3}$ )

## Vibration fork level switches type INOVING R-400 / R-500

$\Rightarrow$ 2-wire AC versions to drive relays, PCL-s
Do not power up 2 wire AC devices without a load connected in series with the unit and without grounding it!

Connector output version
$\mathbf{R} \square \square \mathbf{- 4} \square \square \mathbf{- 1}$

Integral cable output version $\quad \mathbf{R} \square \square \mathbf{- 4} \square \square \mathbf{- 2}$

Please note the 2-w ire AC versions can not be programmed for medium density. The units are manufactured with fixed HIGH Density setting.

## $\Rightarrow$ 2-wire DC versions to drive controllers with current sensitive input

Two-wire loop powered devices, operate according to the DC diagram beside.

Please note, that the 2-wire DC versions can not be programmed for HIGH or LOW FAILSAFE on the device itself.

## Operating diagram

| Fork |  | Status LED | Output |

| Immersed |  | RED | $14 \pm 1 \mathrm{~mA}$ |
| Free | 号谓 | GREEN | $9 \pm 1 \mathrm{~mA}$ |

Connector output version
$\mathbf{R} \square \square \mathbf{- 4} \square \square \mathbf{- 6}$

Integral cable output version $\quad \mathbf{R} \square \square \mathbf{- 4} \square \square \mathbf{- 7}$

## $\Rightarrow$ Ex versoins

An intrinsically safe, CENELEC Ex approved system, consists of the following:
Intrisically safe vibration fork Intrinsically safe remote «INOVING R-400-8,9» switching unit
EEx ia IIC T4...T6 «INOVING JDT-131 Ex» [EEx ia] IIC

The Ex level limit switch is powered by the remote switching unit JDT-131 Ex. The remote switching unit receives the switch signal through a current loop. The remote switching unit provides for a potentialfree power relay output.
High or low-fail safe mode is programmable by switch on the remote switching unit, while switching sensitivity is programmed via changing the polarity of the 2-wire output of the level sensor
Temperature classification according to the Ex certificate:

|  | T6 | T5 | T4 |
| :--- | :--- | :--- | :--- |
| ${ }^{T}$ Ambient $\left[{ }^{\circ} \mathrm{C}\right]$ | 60 | 60 | 60 |
| ${ }^{\mathrm{T}}$ Medium $\left[{ }^{\circ} \mathrm{C}\right]$ | 80 | 95 | 130 |
